ABSTRACT:

PURPOSE: To obtain a safe preparation containing active protein C and/or protein C as active ingredients, having an action for inhibiting the absorption of bone, effective for malignant hypercalcemia caused by osteoporosis, myeloma or lymphoma, etc., and little in side-effects.

CONSTITUTION: This absorption disease-preventing and treating preparation contains active protein C (APC) and/or protein C (PC) as active ingredients. The PC includes a PC produced from human plasma. The activation of the PC is performed e.g. by a method using a thrombin, a method using a poisonous snake, etc. The objective preparation is prepared in the form of a lyophilization

product, an injection medicine such as an aqueous medicine for injection, etc.

The preparation is preferably administered at a daily dose of $10^{-1000\mu\text{g/kg}}$

in terms of the amount of the APC and/or PC protein. The preparation can

continuously be administered by sealing in an imbedding preparation, an osmotic

pressure pump, etc., and subsequently retaining in a living body.
